If you would like to distribute MATFOR executables, you need to certificate your executables. We provided MATFOR CA program to do this, MATFOR CA is located in <START>\programs\MATFOR3\Utilities\MATFOR CA But this program can't be used in trial version.

After you execute MATFOR CA, you will see the following dialog.

Browse the executable file

If your executable file is selected and click OK button, the executable file will be certificated.

Note that you will need to redistribute all of the .dll files located in the <MATFOR>\bin directory together with your program to end-users. Then you can execute it in other computers without MATFOR. For further information, please click Help button.
